

Bryan Zin

San Francisco, CA | bz297@cornell.edu | [LinkedIn](#) | [Github](#) | [Website](#)

Education

Cornell University

Ithaca, NY

Bachelor of Science in Mechanical Engineering

Dec 2021

Relevant Coursework: Linear Algebra, Intro. Machine Learning (Independent, MIT OCW 6.036), Reinforcement Learning (Independent, Stanford CS234)

Research Experience & Projects

Supply-Chain Risk & Financial Markets

Independent Research

Aug 2026 - Present

- Goal: Investigate whether supply-chain risk and resolution language in earnings calls is associated with abnormal stock returns. [Repo](#)
- Built a Python pipeline linking 58,305 earnings calls from 2,200 companies to market data and industry classifications.
- Reconstructed a 254-term supply-chain vocabulary from 50,000 SEC 10-Ks using co-occurrence statistics and truncated SVD.
- Applied Carhart event studies to 52,533 calls; mean two-day abnormal returns fell from +0.52% to -0.41% across risk quintiles.
- Estimated firm and quarter fixed-effects models on 11,950 calls from 378 hardware firms, finding a negative risk–return association.

Machine Learning Reproduction & Experimental Projects

Independent Projects

May 2026 - Present

- Reproduced optimization experiments from the Adam paper (Kingma & Ba, 2015), implementing Adam, AdaGrad, RMSProp, and SGD/Nesterov and comparing convergence behavior on neural-network (NN) training loss. [Repo](#)
- Implemented and evaluated NN architectures using NumPy and PyTorch, including MLP and convolutional models on MNIST/CIFAR-10.
- Designed controlled experiments to investigate optimizer hyperparameters, convergence behavior, dropout, and model architecture.
- Designed a Python pipeline processing 4.7M Hacker News stories to predict engagement from data available at submission. [Repo](#)
- Engineered submission-time features and evaluated models chronologically to prevent future-information leakage.
- Compared historical baselines, Ridge regression, and XGBoost on approximately 600,000 held-out posts.
- Achieved a Spearman rank correlation of 0.297 with Ridge versus 0.050 for a trailing-mean baseline.

Industry Experience

Reframe Innovations, Inc.

San Francisco, CA

Founder

Jan 2026 - Present

- Accepted into Y Combinator (W26) and raised \$1.2M in seed funding to build AI-driven procurement automation for hardware teams.
- Architected automated workflows across bill-of-materials management, vendor quoting, POs, and component tracking.
- Engineered data pipelines to centralize vendor purchasing metrics, providing real-time, sourcing visibility for engineering groups.
- Built seamless integrations with core enterprise software ecosystems, encompassing email, Slack, logistics API feeds, and ERP systems.
- Acquired 6 customers (including Eight Sleep, Revise Robotics, Retina Robotics) generating \$285K in annual contract value.
- Managed customer relationships from initial outreach to product demonstrations to terms, negotiations, and signed contracts.

Freshfleet Robotics, Inc.

San Francisco, CA

Founder

Aug 2025 - Nov 2025

- Designed custom end-effectors for autonomous in-vehicle cleaning, integrating electrical systems and circuit design.
- Secured pre-seed venture capital funding (\$200k) and constructed fully functional, prototype units.
- Developed microcontroller firmware to execute low-level actuation and hardware control, achieving 3-min cycle time per seat.
- Implemented real-time path planning and dynamic collision avoidance algorithms via ROS 2 on UR10e industrial manipulators.
- Managed an external software contractor to accelerate robotics programming and optimize motion planning.

- Led deployment negotiations with major fleet operator, Moove, to validate technical specs against operational constraints.

Apple Inc.

Cupertino, CA

Product Design Engineer III

Jan 2022 - May 2025

- Owned mechanical design, structural integration, and rigorous testing for the iPhone 15 Pro Max, iPhone 17 Air, and iPhone 17.
- Designed and tested the frame to integrate the organic-LED display into the titanium housing in the iPhone 15 Pro Max
- Resolved issues related to display delamination and time-zero quality defects during engineering development by performing failure analyses and implementing corrective actions leveraging quantitative data from CT scans, time-of-flight (ToF) simulations, Fourier-Transform Infrared Spectroscopy (FTIR) and finite element analysis (FEA).
- Designed and tested the antenna module for the iPhone 17, impacting components for WiFi, GPS, 5G+, NFC, and Bluetooth.
- Resolved issues related to bandwidth variance and cellular signal strength by optimizing the design of the clad housing, performing tolerance analyses to ensure that grounding clips, electrical cables, and shielding components fit without interference.
- Engineered ultra slim adhesive architectures to achieve IP68 water and dust resistance (according to IEC standard 60529) within the strict z-height constraints of the iPhone Air form factor.
- Developed advanced pneumatic pressure and leak testing protocols to validate seal integrity under thermal/mechanical stress cycling.
- Formulated validation protocols and evaluated yield datasets to assess critical failure modes and verify engineering modifications.
- Leveraged statistical factory analytics and empirical testing to rectify production bottlenecks, driving >\$50M in yield optimizations.
- Spearheaded international technical investigations and executive presentations with eng/ops teams in US, China, India, and Singapore.

Meta Platforms, Inc.

San Francisco, CA

Product Design Engineer Intern

Jun 2021 - Aug 2021

- Spearheaded physical design for experimental privacy slider mechanism on Oculus Quest 2
- Engineered plastic enclosures incorporating DFM/DFA principles, injection moldability, and detailed tolerance stackup analyses.
- Delivered user research and prototype findings to industrial design groups, enabling a 20% size reduction in privacy switch footprint.
- Conducted ergonomics research across 20+ participants to establish ideal button geometry, travel distance, and accessibility metrics.
- Executed thermal and humidity testing on Oculus Quest 2, capturing over 20,000 telemetry data points for environmental modeling.

Barclays PLC

New York, NY

Summer Analyst

Jun 2020 - Aug 2020

- Evaluated credit line reduction strategies across Barclaycard portfolios using underlying model analytics, regulatory standards, and commercial exclusion policies.
- Performed driver analysis to determine key operational and policy variance across US, Germany, UK, and Small Business card divisions.
- Refined targeting parameters for US credit reduction frameworks, reducing monthly net credit losses by \$13.4M in July 2020.

BAE Systems, PLC

Nashua, NH

Mechanical Engineering Intern

Aug 2019 - Dec 2019

- Architected hardware interface integrating APKWS electronics with Honeywell IMU, utilizing Creo Sheetmetal for flex circuit layout.
- Executed ANSYS finite-element structural and buckling simulations across diverse geometric configurations
- Generated computational fluid dynamics models using STAR-CCM to evaluate aerodynamic profiles to reduce unit production costs.

Skills

Programming: Python (PyTorch, NumPy, Pandas, Scikit), Matlab

Machine Learning: NLP, transformers, neural networks, reinforcement learning, optimizer tuning, supervised learning, PPO, DPO

Awards

US Patent #20240064220A1: Handheld Electronic Device — Patent for a handheld electronic device focused on mechanical architecture design and structural integration of the display module into mechanical housing.
